Scenario

You have been given access to a Cisco ASA 5512 Adaptive Security Appliance via Cisco ASDM. Use Cisco ASDM to edit the Cisco ASA 5505 Adaptive Security Appliance configurations to enable Advanced HTTP application inspection by completing the following tasks:

Starting from the Service Policy Rules ASDM pane,

- Enable HTTP inspection globally on the Cisco ASA appliance
- Create a new HTTP Inspect Map named: **http-inspect-map** to:
 - Enable the *dropping* of any HTTP connections that encounter HTTP protocol violations
 - Enable the *dropping and logging* of any HTTP connections when the content type in the HTTP response does not match one of the MIME types in the accept field of the HTTP request

Note: After you complete the configuration, you do not need to save the running configuration to the startup-config. In this simulation, you cannot test the HTTP inspection policy that was created after you completed your configuration. Not all ASDM screens are fully functional. However, you should be able to view, edit, and delete the HTTP inspect map that you created from the **Configuration > Firewall > Objects > Inspect Maps > HTTP** ASDM screen.
